

Taha Nejabat

CMF DESIGNER · MATERIAL ARTIST

Coventry, United Kingdom · +44 7437 112688
nejabatt@coventry.ac.uk · Tahanejabat.work

PROFESSIONAL SUMMARY

Material Artist and CMF Designer with over 5 years of professional experience creating physically accurate, production-ready 3D materials for design studios and architecture clients at Tastic 3D. Proficient in Substance 3D Designer and V-Ray, with advanced PBR workflows in Blender and VRED. Experienced in material scanning, calibration, and validating digital materials against physical samples and reference photography to achieve realistic, client-approved results. Strong foundation in colour theory, visual composition, and CMF strategy, supported by a Bachelor's in Visual Communication and a Master's in Automotive and Transport Design from Coventry University.

KEY SKILLS

Material Creation	PBR material development, tileable material authoring, physically accurate calibration, production-ready asset delivery
Material Scanning	Client-specific capture, cleanup, calibration, and validation against physical samples and reference photography
Software	Blender (Expert, custom add-ons) · Substance 3D Designer · Substance Painter · V-Ray · VRED · Twinmotion
CMF	Colour, material and finish strategy, trend and lifestyle research, material selection and testing, automotive CMF
Visualisation	Automotive and architectural photoreal rendering, studio lighting, PBR lookdev, HDRI management
Collaboration	Cross-functional teamwork with design, engineering and tech art; client-facing material development

PROFESSIONAL EXPERIENCE

Automotive Designer — CMF & Surface Development

2025 – 2026

Joint Project HPL, Vital Auto, Gravity Sketch, and Coventry University — Coventry, UK

- Developed the CMF strategy for HOPE WAV inclusive electric vehicle — surface finish, material selection and lighting atmosphere developed to communicate safety and emotional reassurance.
- Shaped the CMF direction for HY-ENA industry brief— colour, material and finish strategy grounded in Moroccan architectural and Saharan landscape research.
- Developed photoreal automotive materials in Blender PBR workflows including car paint, glass, chrome, plastics and leather-like surfaces for design reviews.
- Built centralised Blender material and HDRI libraries to standardise lookdev and accelerate iteration across automotive projects.
- Collaborated with Nissan Europe on a car-truck crossover concept under official Gravity Sketch tutors.

CMF Artist & Material Specialist

2020 – 2023

Tastic 3D — Shiraz, Iran

- Created physically accurate, production-ready 3D materials in V-Ray for design studios, sold as part of a commercial material library.
- Used Substance 3D Designer and Substance Painter to create fully customised materials for architecture clients, tailored to specific project briefs and physical material references.
- Conducted material scanning of client-specific physical materials, managing the full pipeline from capture and cleanup through to calibration and final render validation.
- Validated digital materials against physical samples and reference photography, iterating toward client-approved material accuracy.
- Performed site visits to assess and ensure material integrity, working directly with clients to understand project requirements.
- Led trend and lifestyle research to inform material development direction, selecting and testing materials aligned with client briefs.
- Collaborated closely with Iravanian Architecting Group, developing fully customised Substance and V-Ray material solutions for complex architectural visualisation projects.
- Built and maintained a centralised material library standardising PBR output quality across multiple concurrent projects.

Designer

2023 – 2024

NerdLaboratory — Remote, Shiraz, Iran

- Produced high-quality 3D visualisations with strong material realism and lighting control for interactive platforms.
- Developed custom Blender add-ons (Taha's Sticker, Workflow Optimizer) to automate material workflows and decal projection.

SELECTED PROJECTS

2025	AI-Assisted Texture Map Standardisation — PBR Material Library AI-assisted batch naming workflow for scanned texture maps: organised base colour, roughness, normal, displacement, and ambient occlusion files into consistent PBR naming standards, reducing manual file handling and improving material library consistency across Blender and V-Ray workflows.
2020–2023	Iravanian Architecting Group — Custom Material Library End-to-end material pipeline: scanning client physical materials, building customised assets in Substance 3D Designer and Substance Painter, calibrating against physical samples, and delivering production-ready materials for large-scale architectural visualisation.
2020–2023	Commercial Material Library — Tastic 3D Created and sold production-ready PBR materials in V-Ray to design studios. Tileable textures and finish variants across stone, fabric, metal and composite categories.
2024	HOPE WAV — Inclusive Electric Vehicle (Vital Auto) Full CMF and PBR material development in Blender — car paint, glass, interior trim and chrome. Studio and environment render sets produced for design reviews.
2024	HY-ENA — HPL Industry Collaboration CMF-led vehicle concept with material and finish strategy grounded in Moroccan architectural research. Autodesk Alias surfacing with full CMF direction applied.
2025	Volvo P1800 Reforge — EV Concept Advanced Blender PBR material development: sculptural paint, controlled reflections, Nordic-inspired surface treatment with premium highlight readability.

EDUCATION

2024 – 2025	MA, Automotive and Transport Design <i>Coventry University — Coventry, UK</i> CMF strategy, Autodesk Alias surfacing, PBR material development, advanced Blender workflows. Industry briefs with Vital Auto, HPL, Ford, and Nissan Europe.
2020 – 2023	BSc, Visual Communication <i>Apadana University — Shiraz, Iran</i> Colour theory, visual perception, lighting and composition — a direct foundation for material accuracy and visual quality.
2017 – 2019	Associate Degree, Architecture <i>Hafez University — Shiraz, Iran</i> Materiality, spatial form and structural logic — informing how materials interact with light, volume and human experience.

CERTIFICATIONS

Google UX Design Certificate	UX for AI: Design Practices for AI Developers
Empathy in UX Design	Evil by Design: Persuasion in UX
Prompt Engineering for Generative AI	Rapid Prototyping

SOFTWARE & TOOLS

Primary	Blender (Expert, custom add-ons) · Substance 3D Designer · Substance Painter · V-Ray · VRED
Rendering	Cycles · Eevee · V-Ray · Twinmotion · real-time rendering workflows
3D & Surface	Autodesk Alias · Gravity Sketch · Rhino 3D
Design	Figma · Adobe Photoshop · Lightroom · Premiere Pro · Vizcom · Cursor
Familiar with	Unreal Engine 5 · 3ds Max

LANGUAGES

English — Full Professional Proficiency	Farsi — Native Speaker
